

# Open Source Git Management Software

Gitlab is open source software to collaborate on code. Manage git repositories with fine grained access controls that keep your code secure. Perform code reviews and enhance collaboration with merge requests. Each project can also have an issue tracker and a wiki. Used by more than 50,000 organizations, GitLab is the most popular solution to manage git repositories on-premises.

Getting started with Git and GitLab

“My department has been using GitLab since version 1.0 and have found that it’s a good code sharing platform that keeps getting better with each release. GitLab fills our need and desire for such code sharing capability while at the same time satisfying the organizations direction that University intellectual property not be placed on public cloud-based services outside of campus.”

Troy Murray

Information Technologist II - Michigan State University (<http://www.msu.edu/>)

ruby application server

“The on-premise installation is a big  
advantage for companies that need to keep  
sensitive information in-house.”
